

Allowing VoIP calls using FortiVoice and FortiCall

This example sets up inbound and outbound Voice over IP (VoIP) calls using Session Initiation Protocol (SIP) through the FortiGate unit, using a FortiVoice unit and FortiCall services.

1. Setting up a FortiCall account
2. Configuring the FortiVoice unit
3. Configuring the FortiGate unit for outbound SIP calls
4. Configuring the FortiGate unit for inbound SIP calls
5. Results

Setting up a FortiCall account

Go to www.forticall.com and follow the set up instructions. When the account is set up, you will be provided with information to activate your account. You will also need to choose a phone number for inbound calls.

Configuring the FortiVoice unit

Insert the CD into the CD-ROM drive, the FortiVoice Install main window will appear within 20 seconds. Click Install FortiVoice and follow the instructions.

Open the FortiVoice Management software

Go to **Global Settings > VoIP Configuration** and set up a service provider profile for inbound calls.

Set a service provider for outbound calls.

The screenshot shows the configuration page for an outbound profile. On the left, a table lists profiles: MB (Multi-branch), SP 1 (Forticall), SP 2 (Forticall Outbound), SP 3 (Service Provider 3), and SP 4 (Service Provider 4). The main area is titled 'Activate Profile' and includes a 'Service Provider' dropdown set to 'Manual Setup' with an 'Update Configuration' button. Below this, the 'Profile name' is 'Forticall Outbound'. There are checkboxes for 'Disable public IP address substitution' (checked), 'Register with authentication username' (unchecked), and 'Enable NAT keep alives' (unchecked) with a 'Settings...' button. A 'Codec Options...' button is also present. The 'Provisioning Details' section contains fields for 'Proxy/Registrar server name' (forti1.secureto.us), 'Registrar server name', 'Outbound proxy', and 'Realm/domain', with a 'View All Registrations...' button at the bottom.

Go to **Lines and Greetings > VoIP Numbers** and set your phone number for inbound calls.

The screenshot shows the configuration page for an inbound VoIP number. On the left, a table lists VoIP numbers: 1 (1-343-8821592), 2 (1-613-8821592), and others. The main area is titled 'Activate VoIP Number' and includes a 'Select a VoIP Profile' dropdown set to 'Forticall'. The 'Phone Number' section has fields for 'Country code' (1), 'City or area code' (343), and 'Number' (8821592). The 'Username and Password' section has fields for 'User/Account' (000F4D003EBC) and 'Password' (Password). The 'Registration Status' section shows 'Status: Registered' and a 'View All Registrations...' button. The 'Call Handling' section has tabs for 'Mode 1 (Mode 1)', 'Mode 2 (Mode 2)', and 'Holiday Mode (Holiday Mode)'. Under 'Mode 1', it says 'When a call comes in on this phone number, perform the following action: ring extensions' with an 'Edit...' button. Below that, it says 'If all extensions are busy or the call is not answered: perform no action' after '5' rings.

Set a phone number for outbound calls.

The screenshot shows the configuration page for an outbound VoIP number. On the left, a table lists VoIP numbers: 1 (1-343-8821592), 2 (1-613-8821592), and others. The main area is titled 'Activate VoIP Number' and includes a 'Select a VoIP Profile' dropdown set to 'Forticall Outbound'. The 'Phone Number' section has fields for 'Country code' (1), 'City or area code' (613), and 'Number' (8821592). The 'Username and Password' section has fields for 'User/Account' and 'Password'. The 'Registration Status' section shows 'Status: Unregistered' and a 'View All Registrations...' button. The 'Call Handling' section has tabs for 'Mode 1 (Mode 1)', 'Mode 2 (Mode 2)', and 'Holiday Mode (Holiday Mode)'. Under 'Mode 1', it says 'When a call comes in on this phone number, perform the following action: go to voicemail' with a dropdown set to '111'.

Configuring the FortiGate unit for outbound SIP calls

Go to **Security Profiles > VoIP > Profiles**.

Create a new profile and set the **Limit REGISTER request** and **Limit INVITE request**.

Name	<input type="text" value="SIP"/>
Comments	<input type="text" value="Write a comment..."/> 0/255
SIP	
Limit REGISTER request	<input type="text" value="10"/> (requests/sec/policy)
Limit INVITE request	<input type="text" value="10"/> (requests/sec/policy)
SCCP	
Limit Call Setup	<input type="text" value="0"/> (Calls/min/client)

Go to **Firewall Objects > Address > Address**

Create an IP range for SIP phones.

Category	<input checked="" type="radio"/> Address <input type="radio"/> IPv6 Address <input type="radio"/> Multicast Address
Name	<input type="text" value="Internal-SIP-Phones"/>
Color	[Change]
Type	<input type="text" value="IP Range"/>
Subnet / IP Range	<input type="text" value="192.168.1.110-192.168.1.150"/>
Interface	<input type="text" value="lan"/>
Show in Address List	<input checked="" type="checkbox"/>
Comments	<input type="text" value="Write a comment..."/> 0/255

Go to **Policy > Policy > Policy**.

Create a policy allowing outbound SIP traffic. Set **Incoming Interface** to LAN, **Source Address** to the new firewall address, and **Outgoing Interface** to your Internet-facing interface.

Under **Security Profiles**, enable **VoIP** and set it to use the new profile.

Make sure you place this security policy on the top of the policy list.

Policy Type: Firewall VPN

Policy Subtype: Address User Identity Device Identity

Incoming Interface: lan

Source Address: Internal-SIP-Phones

Outgoing Interface: wan1

Destination Address: all

Schedule: always

Service: SIP

Action: ACCEPT

Enable NAT

Use Destination Interface Address Fixed Port

Use Dynamic IP Pool

Use Central NAT Table

Log Allowed Traffic

Security Profiles

AntiVirus: default

VoIP: SIP

ICAP: default

SSL/SSH Inspection: default

Seq.#	ID	Source	Destination	Schedule
lan - wan1 (1 - 2)				
1	2	Internal-SIP-Phones	all	always
2	1	all	all	always

Configuring the FortiGate unit for inbound SIP calls

Go to **Firewall Objects > Virtual IPs > Virtual IPs**

Create a new virtual IP mapping the external IP on the **wan1** interface of the FortiGate to the internal IP of the FortiVoice on UDP port 5060.

Go to **Policy > Policy > Policy**.

Create a policy allowing inbound SIP traffic. Set **Incoming Interface** to your Internet-facing interface, **Outgoing Interface** to LAN, and **Destination Address** to the new virtual IP.

Enable **VoIP** and set it to use the new profile.

Results

Go to **System > Dashboard > Status** and add the **VoIP Usage** widget.

When the widget appears, verify **Voice Calls**.

Go to **Log & Report > Traffic Log > Forward Traffic** to verify that both inbound and outbound SIP traffic is occurring.

Select an entry for details.
