

Blocking files too large for AntiVirus to scan and creating a custom replacement message

By default, your FortiGate unit's AntiVirus scans files that are smaller than 10MB. In this example, your FortiGate will block files larger than this limit and send a custom replacement message to users who attempt to download oversized files.

1. Enabling antivirus profiles for all policies allowing Internet access
2. Editing the default proxy policy to block oversized files
3. Configuring a custom replacement message for oversized files
4. Results
